SYNCHRO9 TRAINING SCHEDULE

October 2026

Sun	Mon	Tue	Wed	Thu	Fri	Sat
				1	2	3
4	5	6	7	8	9	10
11	12	13	14	15	16	17
18 4-5pm TEAM 1&2 5-6pm TEAM 3&4 PT & dance Off ice Myniss	19	20	21	22 10-11pm Sunway	23	24
25 4-5pm TEAM 1&2 5-6pm TEAM 3&4 PT & dance Off ice Myniss	26	27	28	29 10-11pm Sunway	30	31 4-5pm TEAM 1&2 5-6pm TEAM 3&4 PT & dance Off ice Myniss

OCTOBER

Week	Dates	Training focus	Key deliverables
1	18 Oct	Planning, & baseline assessment	Assess skater levels, flexibility, balance,strength,music connection
2	25 Oct	Technical foundations	Establish posture, endurance, core
3	31 Oct	Team skills development	Identify strengths, weaknesses and training targets for each skater

NOVEMBER

Week	Dates	Training Focus	Key deliverables
4	8 Nov	Team fundamentals	Introduce timing, spacing, holds and basic formations
5	15 Nov	Formation training	Practise circles, lines, blocks and transitions appropriate to the team
6	22 Nov	Synchronisation and unison	Improve alignment, matching steps, rhythm and team awareness
7	29 Nov	Choreography and musicality	Develop movement sequences and connect formations to music

DECEMBER

Week	Dates	Training Focus	Key deliverables
8	1 Dec	Team fundamentals	Conduct a team run-through,record performances and evaluate progress
9	8 Dec	Task and completed challenges	Complete individual & team skill assessments
10	15 Dec	Synchronisation and unison	Improve alignment, matching steps, rhythm and team awareness
11	22 Dec	Choreography and musicality	Final assessment, individual and tea, feedback
12	29 Dec	Final session of 2026	Selection

Proposed weekly training structure

For the first 12 weeks, suggesting 2 hours progressive session by the coaching team to develop the skaters.

Session	Main focus	Suggested duration
Session 1 — off/on ice	Individual skating skills, edges, stroking and control	45-60min
Session 2 — off/on ice	Synchro9 elements, formations and synchronisation	45-60min
Session 3 — off/on ice	Group, choreography and team practice	30-45min
Off-ice PT/Dance session	Conditioning, balance, coordination and musicality	30–45min

These are proposed durations, not fixed requirements. Adjust the frequency and workload according to skater ability, ice availability, budget and recovery needs.

Recommended off-ice session structure

For a 45-minute session, the structure will be as follows:

Time	Activity	Content
0–5 min	Warm-up	Light jogging, dynamic mobility, arm and leg movements
5–15 min	Balance and core	Single-leg balance, dead bugs, planks, controlled squats
15–25 min	Strength and conditioning	Lunges, calf raises, glute bridges, bodyweight exercises
25–35 min	Synchro coordination	Music counting, matching steps, formations and direction changes
35–40 min	Flexibility and mobility	Gentle hip, ankle and leg mobility
40–45 min	Cool-down and review	Breathing, stretching and coach feedback

Weeks 1–3

Phase 1: Assess and establish

- Complete individual skill assessments.
- Establish training expectations and attendance requirements.
- Set up the coaching structure and training timetable.

Weeks 4–7

Phase 2: Build team skills

- Develop formation control, spacing and unison.
- Introduce suitable Synchro9 elements progressively.
- Monitor each skater's ability to work within the team.

Weeks 8–10

Phase 3: Integrate and refine

- Develop choreography and transitions.
- Improve consistency, musical timing and performance quality.
- Review team readiness through regular video feedback.

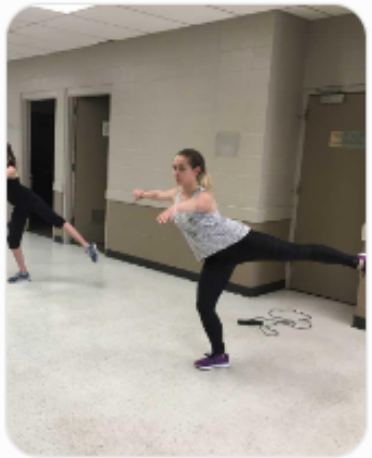

Weeks 11–12

Phase 4: Evaluate and prepare for selection

- Conduct a mock assessment.
- Provide individual progress reports.
- Identify areas requiring further development before Q1 selection.

Training phase	Off-ice priority
Q1 **Foundation**	Posture, balance, core stability and coordination
Q2 **Team development**	Rhythm, synchronisation, spacing and direction changes
Q3 **Element preparation**	Controlled strength, agility, movement sequences and musicality
Q4 **Performance preparation**	Programme stamina, consistency and competition-style run-throughs

1. What off-ice training is needed for Synchro9?

1. Balance and body control

High priority

- Single-leg balance and stability
- Core control and posture
- Knee and ankle stability
- Controlled turns and changes of direction

Purpose: maintain alignment, control edges and stay stable during formations and transitions.

2. Strength and conditioning

High priority

- Bodyweight squats and lunges
- Calf raises and glute strengthening
- Core stability exercises
- Safe jumping and landing mechanics, where appropriate

Purpose: support skating posture, control, endurance and safe movement.

3. Flexibility and mobility

- Dynamic warm-ups
- Hip and ankle mobility
- Hamstring and quadriceps flexibility
- Controlled flexibility work for skating positions

Purpose: improve range of motion while maintaining strength and control. Avoid forcing splits or overstretching.

4. Synchronisation and musicality

Essential for synchro

- Rhythm and beat recognition
- Counting music in eights
- Matching arm and leg movements
- Practising lines, spacing and formations on the floor
- Moving together and changing direction on cue

Purpose: help skaters learn to move as one team before transferring the movements onto the ice.

5. Cardiovascular endurance and agility

- Short intervals of low-impact cardio
- Footwork and reaction drills
- Direction changes and spatial awareness
- Gradually building stamina for programme run-throughs

Purpose: help the team maintain quality and timing throughout the programme without excessive fatigue.

Selection assessment framework

To ensure the training programme has measurable outcomes, coaches will evaluate skaters throughout the 12 weeks (Oct-Dec) training rather than waiting until the final assessment.

Assessment area	Suggested weighting
Individual skating skills and technical control	30%
Synchronisation, timing and formation awareness	25%
Ability to learn and execute team elements	20%
Consistency, attendance and commitment	15%
Teamwork, coachability and performance readiness	10%
Total	100%
